

ABSTRACT OF THE DISCLOSURE

5 A emergency light system for providing emergency lighting
identification of a vehicle. The emergency light system includes a
plurality of light emitting members being designed for being
coupled to the vehicle whereby each of the light emitting members
emits light to visually indicate the location of the vehicle. Each of
10 a plurality of holder members selectively receives one of the light
emitting members. Each of the holder members is designed for
being coupled to the vehicle whereby each of the holder members is
for selectively securing the light emitting members to the vehicle.
